## The challenge

Adient started producing in the Czech Republic in the post-revolutionary era. They needed logistics activities to support their production facilities. They asked Ewals to arrange transport, but also to perform value-added services like gluing parts and packing material. By outsourcing these activities, Adient is able to focus entirely on their core business.

# Automotive Industry

Ewals and Adient, a partnership with a long history that goes back to the previous century! Besides arranging full and part loads, Ewals provides this worldwide player in car seats and components with a wide range of value-added services. Ewals takes supplier material to a warehouse and performs pre-production activities, e.g. gluing. We pack the resulting in boxes and move it to a second hall, where it is used in the production of car seats.

# Automotive Industry

The finished product is then placed on **Warehouse On Wheels** trailers intended for Just-In-Sequence deliveries (with GPS control), reducing the need for storage space and handling. Ewals also deals with the return flow of empty packaging (i.e. racks). Ewals solves the logistics puzzles and turns challenges into opportunities so that Adient can focus on business growth.

Ewals has the operational flexibility to make timely deliveries of part loads, either through a fixed trunk-load schedule, co-loading or milkruns, on our own Mega Huckepack XLS fleet or using the equipment of our robust partner network.

# Automotive Industry

Being able to focus on your core business is a relief. Certain value-added services can be outsourced to Ewals because they are logistics experts.
