Automotive Industry

The challenge

It can be quite a challenge to find a partner capable of transporting vast numbers of full and part loads to and from several European countries and Slovakia while guaranteeing an outstanding level of service.

Automotive Industry

Besides transporting with **FullLoads@Ewals**, this large supplier of automotive parts is facing up to this challenge by making use of our **PartLoads@Ewals** capabilities. ZF Slovakia cooperated with Ewals to set up and deploy **Milkrun** options from several suppliers to their sites. Besides the usual lead time and cost advantages, having a recurring flow of limited quantities of goods from multiple suppliers created agility.

Automotive Industry

To optimise lead time, Ewals has made frequent use of its **Fast Freight** option by arranging driver swops at strategic locations (i.e. pony express set-up). Ewals also selects equipment based on which service is required in terms of shipment size and lead time, matching our service to the customer's need.

Automotive Industry

To top it all off, a **Shunting** option is used between two sites to ensure a stable flow of material and solves a storage challenge. This total package comes with year-round personal service.
